- One person roll-out installation
- Won't scratch panel finish
- Won't crack, dent or rust during shipping or installation
- Won't clog from airborne dust
- Prevents insect infiltration
- Prevents snow infiltration
- Provides proven roof ventilation
- Meets all model building codes
- Packing in English, French and Spanish
- No waste — use leftovers on next job
- Will not support a flame
- Made in U.S.A.

Application

ProfileVent

New or re-roof on Purlin or wood deck Construction: Use a 2' opening at the ridge to provide ventilation. On new or re-roof of wood deck construction, cut a 2' slot at the ridge (1" each side, start cut 6" from gable ends). On purlin construction position panels to leave a 2' opening.

Available in convenient sizes

- 20' package
- 50' package
- 100' package

1 Allow 2' opening at ridge for ventilation. ProfileVent is rolled out along the ridge, gable to gable, about 1" up-slope from the ridge cap edge. The positioning adhesive on most profiles will hold ProfileVent in position and allow for repositioning.

2 ProfileVent can be cut with scissors or utility knife.
Inset: When splicing ProfileVent, make the splice at the center top of the high rib and use caulk or sealant along the splice.

3 Screw down or pop rivet the ridge cap according to manufacturer's instructions (works with any ridge cap).
